

Web Development Task 1

The image shows a web form titled "TABLE BOOKING FORM" overlaid on a background image of a restaurant interior. The form is titled "Booking" and contains the following fields:

- Date
- Hour
- Full Name
- Contact Number
- Number of People?

A red button labeled "BOOK TABLE" is positioned below the "Number of People?" field.

The above picture is the basic layout of the TABLE BOOKING FORM for a restaurant's website consisting of a block in which the heading "Booking" is given and there are fields of Date, Hour, Full Name, Contact number and Number of People along with a "BOOK TABLE" button.

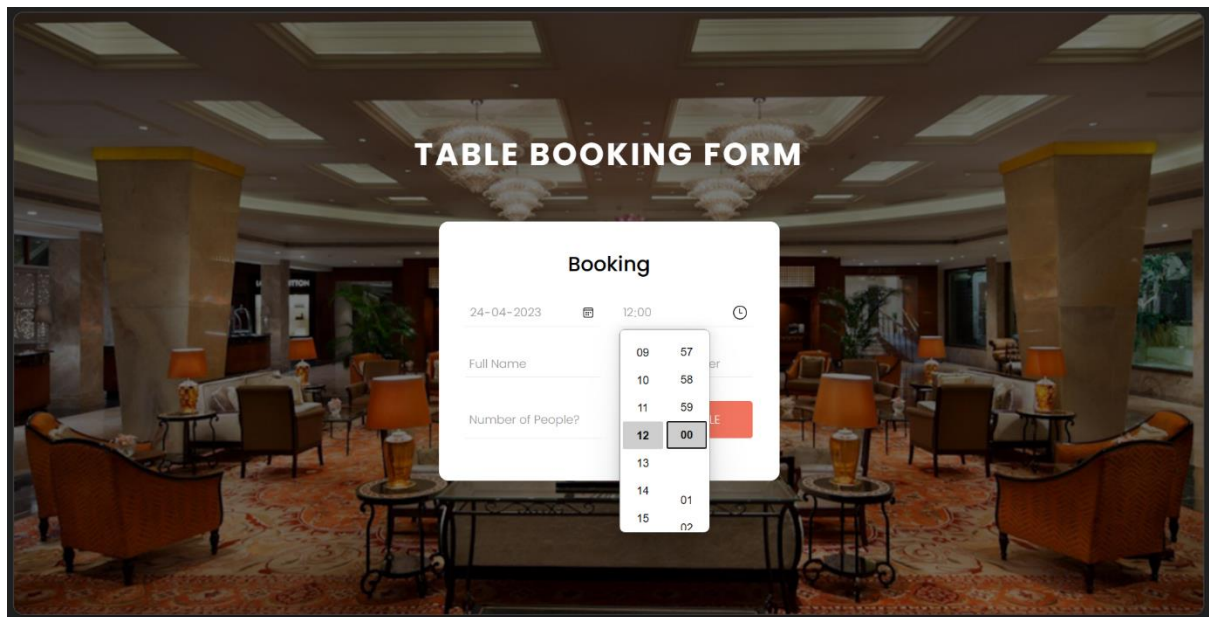

The image shows the same web form as above, but with a date picker overlay on the "Date" field. The date picker displays the month of April, 2023, and a calendar grid with the following dates:

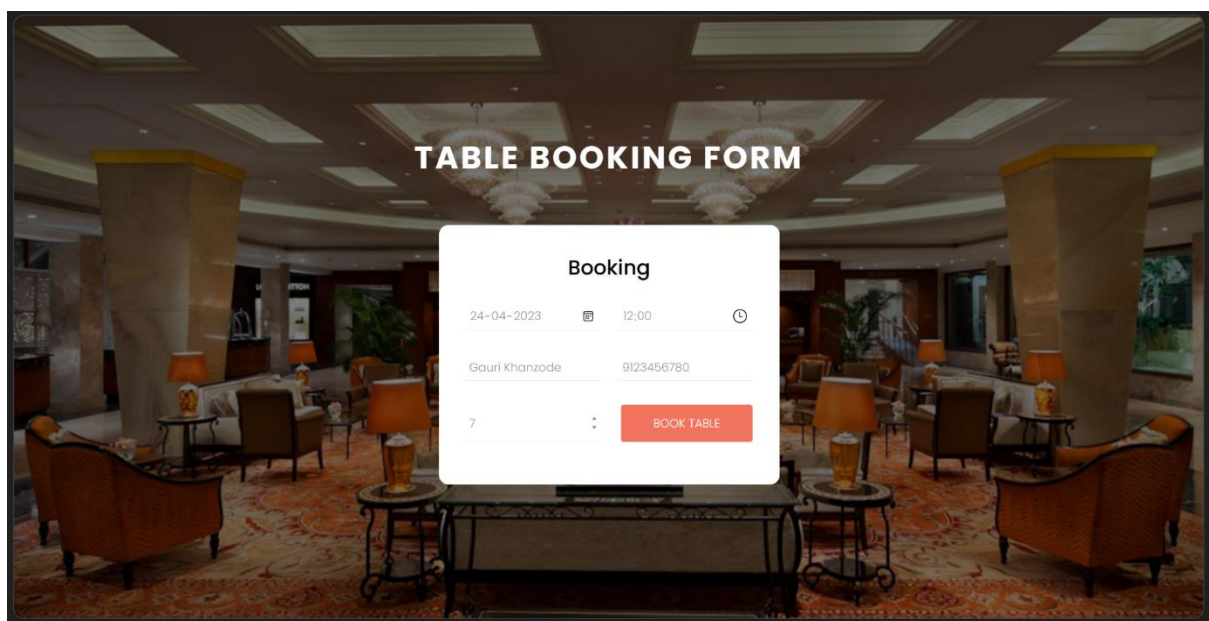

Su	Mo	Tu	We	Th	Fr	Sa
26	27	28	29	30	31	1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	1	2	3	4	5	6

The date 24 is highlighted. Below the calendar grid are "Clear" and "Today" buttons. The "BOOK TABLE" button remains visible below the form fields.

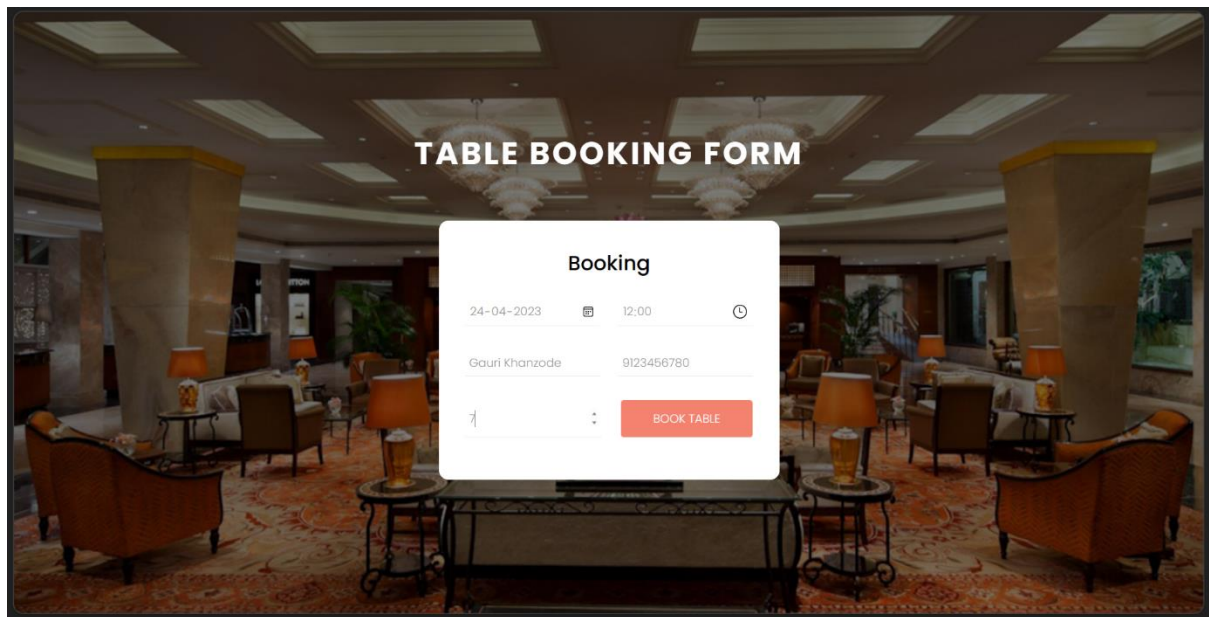

In the above picture the user can add their desired date of the table booking.

And they can add their desired time for the particular booking.

Next they can go on filling their relevant information in the remaining fields i.e. Full name, Contact number and Number of people.

Finally they can press on "BOOK TABLE" button and the form will be submitted.

Their entries will be recorded on the staff's side through a server.

Thank you.
